

Lesson 05 Demo 02

Uninstalling Unused Jenkins Plugin

Objective: To uninstall an unused Jenkins plugin for ensuring the smooth functioning of a Jenkins CI/CD pipeline

Tools required: Jenkins

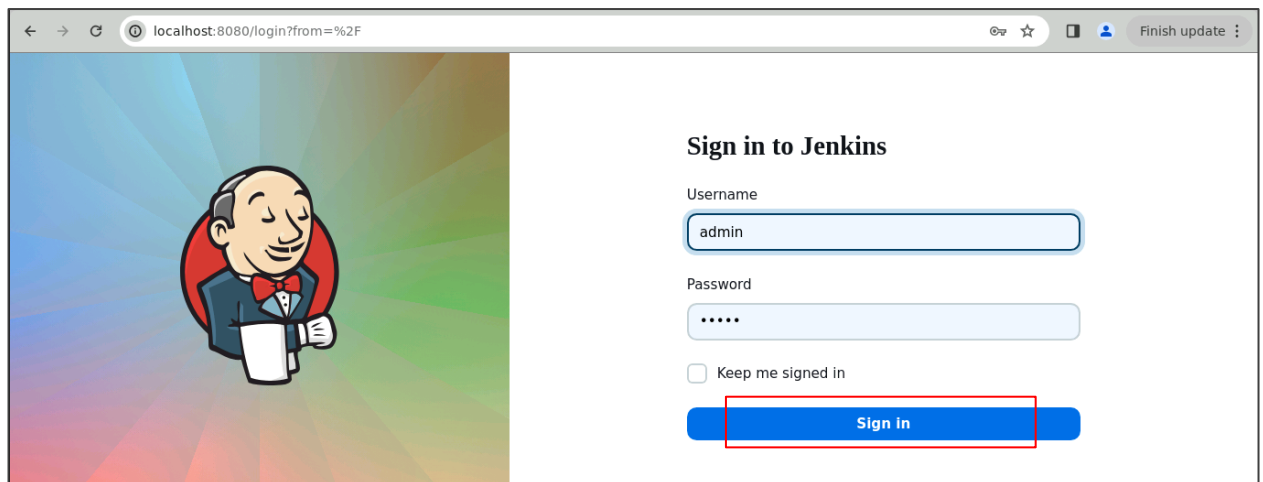

Prerequisites: You need to have a Jenkins up and running.

Steps to be followed:

1. Log in to Jenkins CI tool
2. Uninstall the Maven Integration plugin

Step 1: Log in to Jenkins CI tool

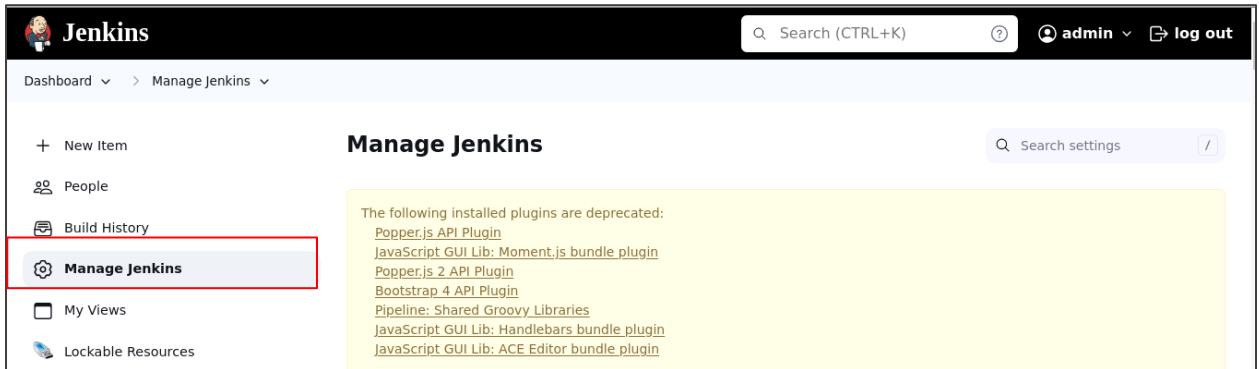

- 1.1 Navigate to **localhost:8080** in your web browser, enter your credentials, and click on **Sign in**

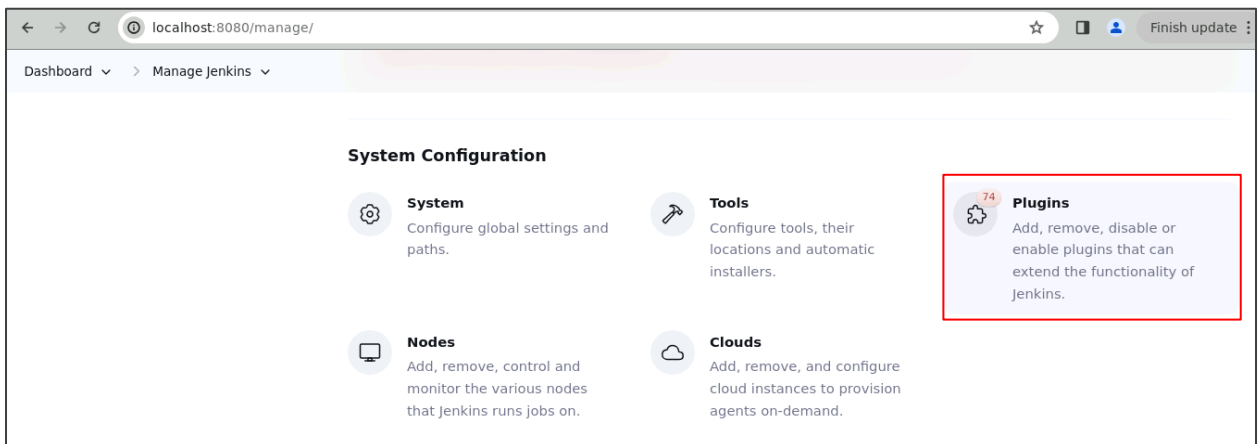

Note: The credentials for accessing Jenkins in the lab are Username: **admin** and Password: **admin**.

Step 2: Uninstall the Maven Integration plugin

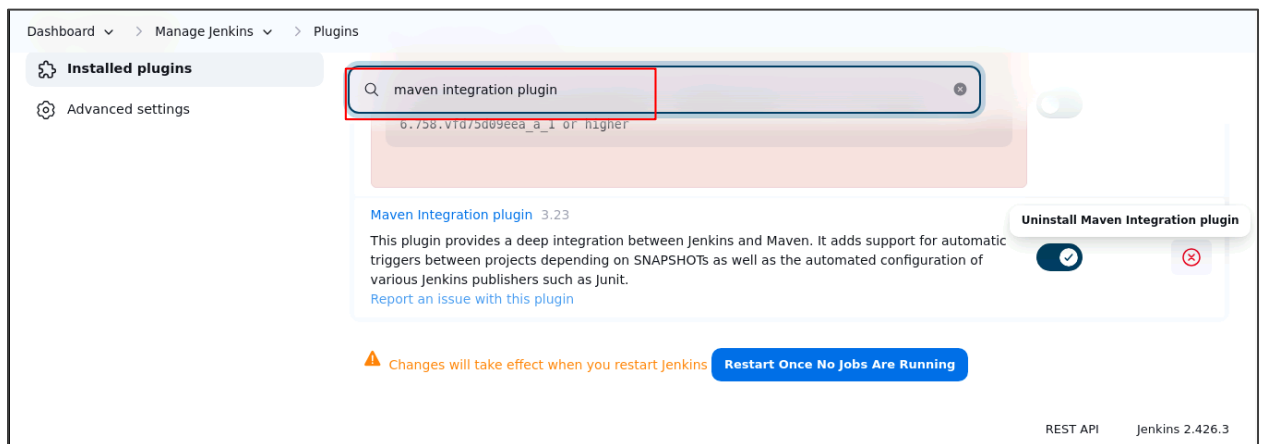

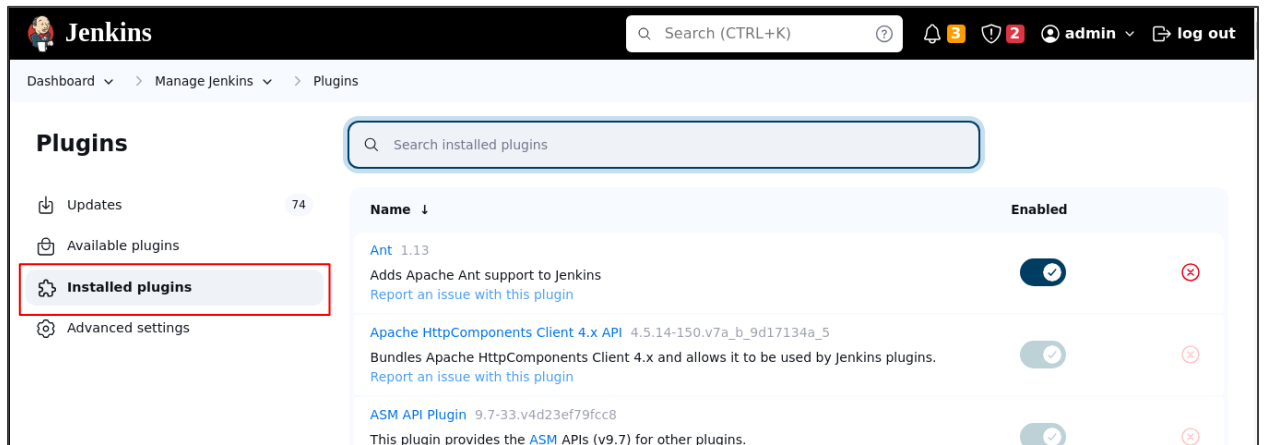

2.1 Click on **Manage Jenkins** on the Jenkins dashboard

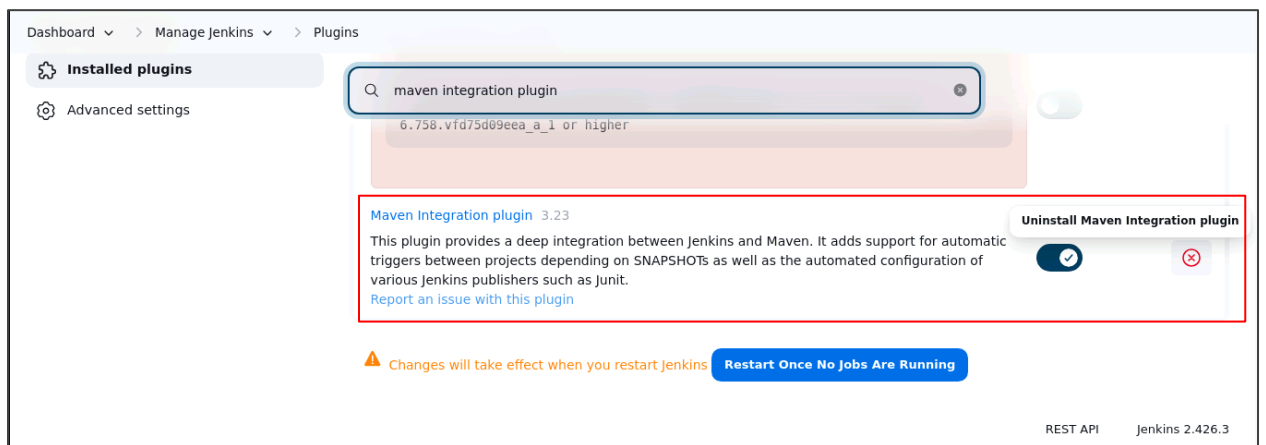

2.2 Scroll down and click on **Plugins** under **System Configuration** to locate the plugin you want to uninstall

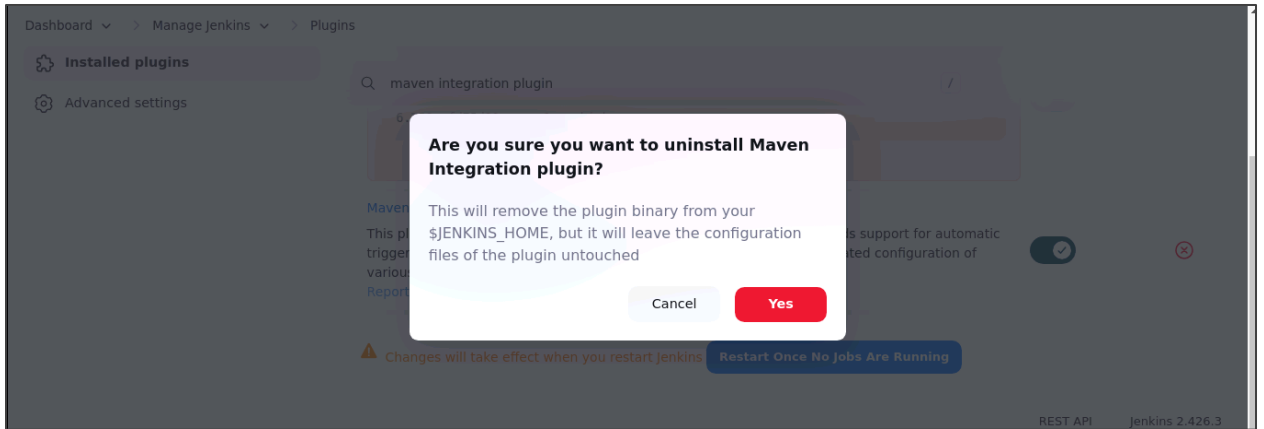

2.3 Click on **Installed Plugins** and search for the **Maven Integration plugin**

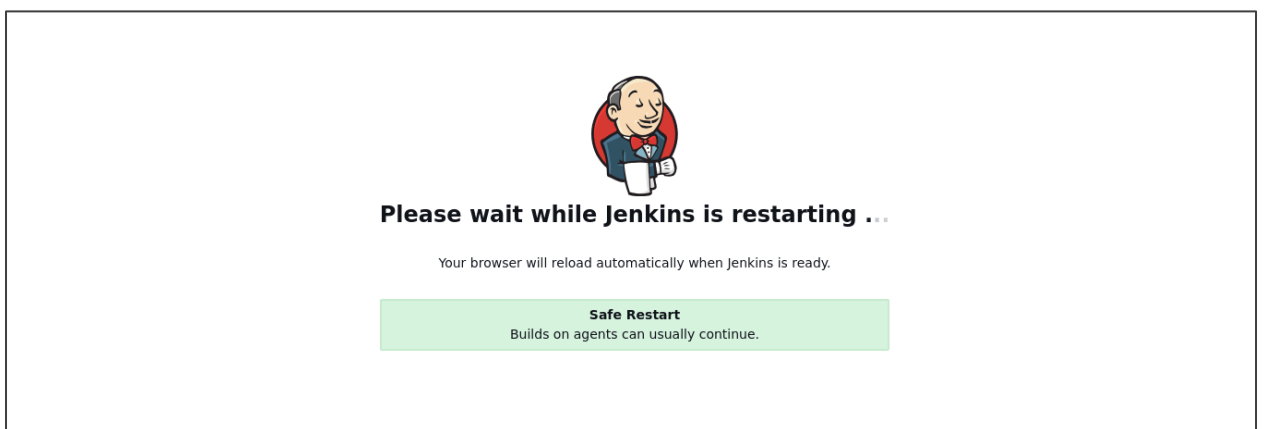

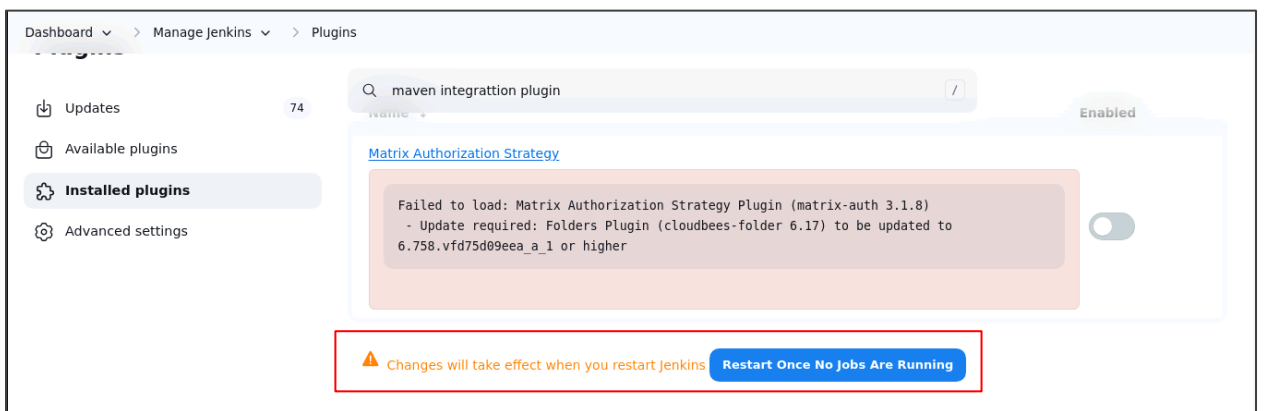

2.4 Click on the cross button as shown to uninstall the plugin, and then click **Yes** when the pop-up message appears

2.5 Restart Jenkins to complete the uninstallation process

By following these steps, you have successfully uninstalled an unused Jenkins plugin for ensuring the smooth functioning of the CI/CD pipeline.
